## DETAILED ACTION

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-17 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The limitations regarding the interpolation part are not clearly explained in the specification. Namely, the factor  $n$  by which the frequency of the first clock is multiplied to obtain the frequency of the second clock signal is not defined properly. This section does not relate to the specification well. All other claims are objected to as being dependent on a rejected base claim.

Claims 1-17 are rejected under 35 U.S.C. 112, first paragraph, as based on a disclosure which is not enabling. The definition of  $n$  in the interpolation part is critical or essential to the practice of the invention, but not included in the claim(s) is not enabled by the disclosure. See *In re Mayhew*, 527 F.2d 1229, 188 USPQ 356 (CCPA 1976). It is not clear how the portion relates to the disclosure. All other claims are objected to as being dependent on a rejected base claim.

Claims 1-17 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 1<sup>st</sup> paragraph, set forth in this Office action.

### **Conclusion**

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The cited references relate to methods for sampling using the given interpolation techniques. The closest prior art is Honma, US Patent 6,671,244, which still fails to disclose the given method of selecting an interpolation signal based on the phase error.
